

Workshops to Choose From

The Summit will conduct ten one-hour long exciting and educational workshops to engage delegates focused group discussions and hands-on learning. Each delegate will join 2 workshops.

The Summit will present a unique opportunity for participants to be in close contact with experts discussing current challenges. Through motivational speakers and engaging workshops the Summit hopes to foster a new generation of environmental and sustainability leaders.

Workshop	Presenter	Description
Making Efficient our Energy Management and consumption in our schools and at homes	MERALCO A corporate energy manager or a Manager of a local Electric Coop	Through presentations and activities, learn about future goals and initiatives and how our community can do its part to reduce energy use. This workshop will discuss the importance of energy conservation and specific projects and initiatives that have helped the locality reduce its energy use. It will cover upcoming initiatives that will look to continue the locality's energy reduction, and specific tips and actions that you can do within your home to reduce your energy use. At the end of the workshop, participants will be able to determine, in teams, the best way to meet the energy demands of the school and the LGU and learn more about the environmental impacts associated with certain choices.
Veggies for a better meal and a better world	An organic farmer or gardener or a botanist	A hands-on workshop on planning for a school or backyard garden. A garden can be as small as a few herb pots or as big as a sunny back yard full of veggies for year-round eating. Workshop topics include: What are your goals? Soil, location, starting from seeds, and timing. How to have happy plants, Internet aids, Garden tricks, and 1 or 2 challenges!
Vibrant community visioning Mural	AG Saño - A passionate mural artist who is also an environmentalist	A discussion on environmental rights and in support of the Right to a Healthy Environment, ensuring that access to fresh air, clean water and healthy food guides the community's direction into the future. In this workshop, you will have a chance to express your vision for a vibrant and sustainable community by turning it into a creative mural with other participants in the workshop. Join this

		workshop and have some fun!! All art supplies will be provided!
DO it Yourself Wisdom Workshop	A successful producer of home-based products or a resource person from DOST	Today we buy all stuffs we once made at home - food, textiles, soap - leaving it to big companies to make what we need. There are hidden toxics in our everyday household cleaning and personal care products. This workshop will help you start to reduce your exposure to toxic chemicals. We'll make three things you use daily: toothpaste, deodorant and liquid laundry soap with simple food-grade ingredients.
Throwing it away? Repurpose Instead	Metro Manila Recycling Movement	Are you throwing that away? Think AGAIN. Reuse is an important part in protecting our environment, more so than recycling. Learn how to turn your house trash into a secret stash!
Why Sustainability		Sustainability is more than just statistics and facts about our changing world; sustainability is the collection of stories, passed on between individuals, which paint a bigger picture. Through sharing and listening to each other's stories, this workshop will connect-the-dots to bring ourselves, others, and the world around us, together.
Invasive species	A Biologist or biodiversity expert	Invasive plants and animals present the second most serious threat to biodiversity after habitat loss. Join this engaging workshop and discover the often pretty, but growing concern posed by common invasive species. This workshop teaches how to recognize the area's worst offenders with plants sample and show how you can be part of the solution!
Sustainable Food	Chef expert on organic seafood	Learn all about sustainable seafood! You'll learn about where seafood comes from, how you can make ocean friendly choices in your grocery stores, and how you can cook delicious meals with seafood for your friends and family to enjoy.
Handmade paper	Recycler of waste paper	Handmade Paper is easy to make and environmentally friendly too. Join a paper making demonstration
Creative Eco Marketing	Marketing Expert	Communication in the 21st century is critical for success. Rather than having to communicate the same message more

		<p>than once, let's try being creative! Demonstrate your skill in an elegant and artful manner. In this workshop, experience and explore the unforeseen strength of good communication and explore the possible applications of eco-marketing.</p>
<p>'From Consumer Society towards Value-based Society'</p>	<p>A Professor on Political Economy</p>	<p>Overconsumption is costing us, the Earth and human happiness. In our society, consumers are purchasing more and more items, and throwing more of it, when it's relatively short useful life is over, away. The global waste crisis tends to be defined both a problem of production and a problem of consumption. Production processes are wasteful: many materials used, not enough by-products recycled. Consumers do not know where the waste by-products from the manufacturer of consumer items they buy end up, or even what that waste is composed of. Post-consumer waste and pre-consumer wastes are making their way around the world, with detrimental environmental and social impacts of which consumers have little understanding. It calls for humanity to think over what environmentally responsible consumption decisions could be made, how we could stop exceeding the 'carrying capacity' of the planet, how to reconstruct our society into the world where we consume less and value more. An age in which product repair is a common and natural activity may return, the recycling technologies may be developed.</p> <p>This workshop will develop recommendations relevant to the national and local governments, private sector, NGO's, communities as well as recommendations, which can be implemented by every participant in his or her school and community at the individual level.</p>
